

HOW DO I SECURE MY HOME?

ServiceMaster DSI is ready to help restore your home and peace of mind. As the experts in disaster restoration, ServiceMaster DSI recommends the following:

GETTING PREPARED

- **Give yourself time to stock up on emergency supplies.** Have a week's supply of water (one gallon per person per day), plenty of non-perishable food items and refill necessary prescriptions for all family members, including pets.
- **If you need to evacuate, prepare a "go kit".** Include items such as hand sanitizer, or bar or liquid soap if not available.
- **Review and understand your insurance coverage.** Take photos of your insurance policy statements and save them to the Cloud.
- **Create your communication plan.** Landline and cellular phone systems are often overwhelmed following a disaster, so you may need to use text messages and social media. Designate an out-of-town contact who can help your household reconnect, and be sure to practice your plan with your family.
- **Fill your vehicle's gas tank** and make sure you have a car charger for your cell phone.

PROTECTING YOUR PROPERTY

- **Bring in loose items outside your home** that can be picked up by strong winds.
- **Close windows, doors and hurricane shutters.** If you don't have hurricane shutters, board up windows and doors with 1/2" marine plywood.
- **Turn off propane tanks and unplug small appliances.** If you lose power or leave your property, shut off the main switches in the circuit breaker box.
- **Take photo/video of the exterior and interior of your home.** Take vital documents (birth certificates, social security cards, bank records, etc.) with you.

Planning can save you, your family and your home. Contact ServiceMaster DSI today for help.
